PROJECT DESCRIPTION:

We use many websites in our daily life in search of information. Some websites might be genuine and some might not.

So our project contains the concept of checking whether the website is genuine or not. Here in our project to check the genuineness of the website we had considered the age of the website, i.e., if the website is more than 10 years old, then it can be considered as genuine, else it might not be genuine. And these considerations are done by simply adding chrome extensions.

SOFTWARE REQUIREMENTS:

IDE : Visual Studio code

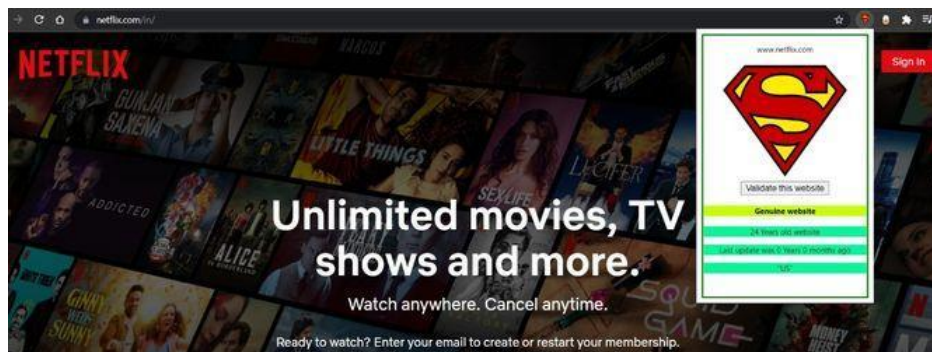

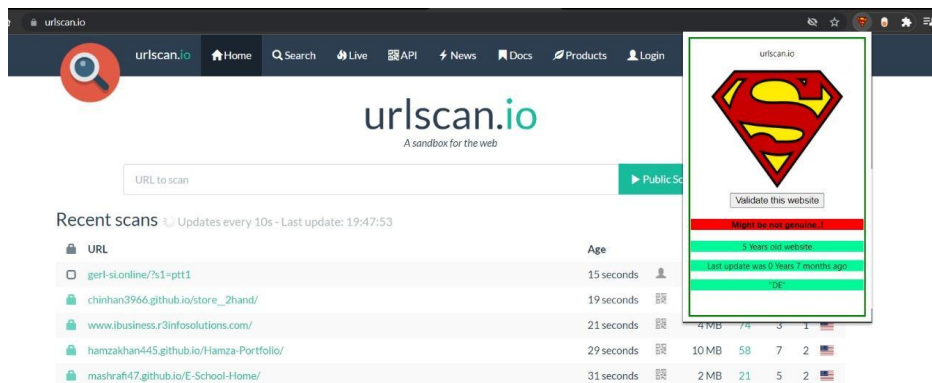

FRONTEND : HTML ,CSS ,JavaScript

API : JSON

PROJECT STAGES:

Created container with HTML/CSS
Developed the program using JS
Fetched the data using API
Implemented the logic
Added the Extension to Chrome

PROJECT PREVIEW:

PROJECT STATUS:

✓ Completed
