DESCRIPTION :

We all are familiar about an application named Microsoft teams right!

Here's a mini project done by using the same applications. We initiated a simple change that, it reminds the user according to the time set by them even when the system is in sleep mode.

So that, when the system enters into a sleep mode before an activity gets started, it reminds the user to attend the activity.
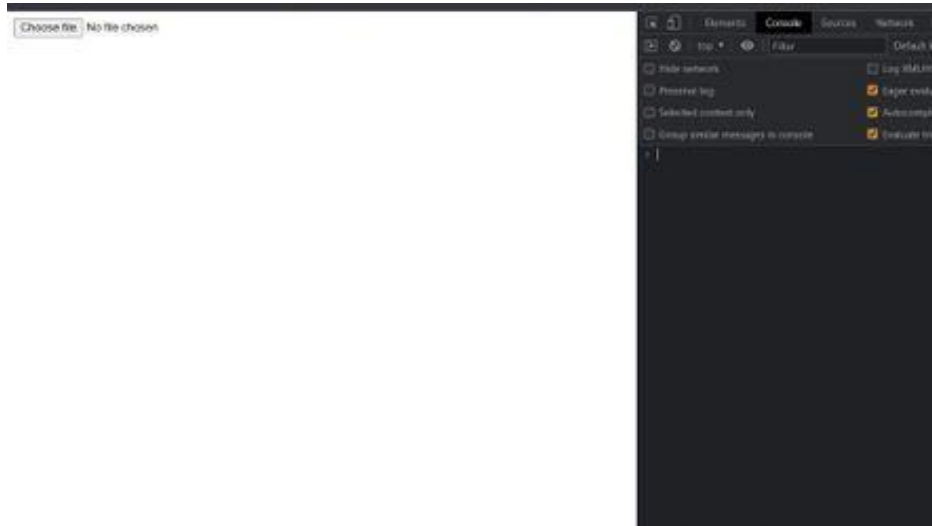

IDE : Visual Studio Code

LANGUAGES USED :

    Java script
    HTML

PROJECT PREVIEW:

We need to choose a .txt file by providing the time as follows :

After
to
by

where the timer which reminds the user is set.

this we need
upload a file
selecting
"choose file".

When the time given in .txt file matches with the time of our local system teams website will open automatically in the default browser as follows :

PROJECT STATUS:

✅**Completed**
